- Gravity discharge louvers (Standard) Motorized discharge louvers (Optional)
- Fixed Intake louvers (Standard)
- Motorized Intake Louvers (Optional)
- Front Discharge air plenum W/ Access Door
- Water Resistant Design

Auxiliary Systems, Inc. is a 100% Woman-Owned small business that was founded in 1990 by Sharon A. Williams, under the name Pure Water Technologies. The company's initial value proposition was to generate and supply feed water to US Navy ships and local shipyards. Throughout the next two decades, the company evolved by utilizing the Navy SIMA and FTSC/LANT ship repair models which led to the addition of the electric motor, pump, valve, compressor, condenser, boiler, AC&R, machine, and fabrication shops. In 2011, we set out on a new path to diversify into commercial manufacturing. Today, we are very proud of our three Auxiliary Systems, Inc. brands that are all 100% **Made In The USA!**
